Supporters of CBTricks.com paid for the hosting so you would have this file.

CBTricks.com is a non-commercial personal website was created to help promote the exchange of service, modification, technically oriented information, and historical information aimed at the Citizens Band, GMRS (CB "A" Band), MURS, Amateur Radios and RF Amps.

CBTricks.com is not sponsored by or connected to any Retailer, Radio, Antenna Manufacturer or Amp Manufacturer, or affiliated with any site links shown in the links database. The use of product or company names on my web site is not endorsement of that product or company.

The site is supported with donations from users, friends and selling of the Site Supporters DVD's to cover some of the costs of having this website on the Internet instead of relying on banner ads, pop-up ads, commercial links, etc. Thus I do not accept advertising banners or pop-up/pop-under advertising or other marketing/sales links or gimmicks on my website.

All the money from donations is used for CBTricks.com I didn't do all the work to make money (I have a day job). This work was not done for someone else to make money also, for example the eBay CB sellers.

All Trademarks, Logos, and Brand Names are the property of their respective owners.
This information is not provided by, or affiliated in any way with any radio or antenna Manufacturers.

Thank you for any support you can give.

In some Cobra 29-RFX75 installations, the carrier level may be lower than desired. This information details how to INCREASE the carrier level.

IMPORTANT: Do not increase carrier higher than 15 watts.

GENERAL INFORMATION

1. On the Cobra 29, the 220pF capacitor at C62 determines the carrier level of the stock radio and in turn will adjust the carrier level of the RFX75.
2. On some radios, on the solder side of the PCB there is a 33pF capacitor added, in parallel, to C62. This is done at the factory when a radio's carrier level is too low. The additional 33pF of capacitance increases the carrier to the desired level by the factory.
3. Adding additional capacitance at C62 will increase the carrier.

MODIFICATION

1. Add a 30pF to 68pF ceramic disc capacitor (rated at no less than 50V, 100V or greater part recommended) in parallel with C62 on the solder side of the PCB.
2. It is highly recommended to start with a value closer to 30pF. Even a small amount of additional capacitance makes a big difference in carrier levels.

30pF – 68pF capacitor in parallel with C62
